

Meal delivery solved convenience. It didn't solve retention.

73.6%

annualized churn benchmark for meal-kit subscriptions

○ ~74 of 100 cancelled ● ~26 remain after 12 months

Static meal experience → relevance declines → people cancel

WHY PEOPLE CANCEL

46% of cited reasons involve changing tastes or circumstances

Customers change every week. Their meal plan should too.

Source: [RetentionCheck, "Meal Kit Subscription Churn Benchmarks," updated May 2026](#). Editorial estimates anchored to published industry ranges — not audited industry statistics and not Nutrics data. Grid is illustrative.

The food is the output. The intelligence is the product.

Nutrics builds a personalized food plan around the person, then fulfills it through a network of food partners.

Why now: AI-driven personalization + existing food-production capacity make this possible without owning kitchens.

PERSON

Goals · calories / macros · diet ·
preferences · feedback

LIFE

Schedule · days · meals needed

SUPPLY

Recipes · portions ·
available food partners

The menu adapts to the customer, not the other way around.

Built — not just proposed.

- 1 Nutrition target set from the profile
- 2 Ask for a plan in plain language
- 3 Plan built from available meals, fitted to days and meals per day
- 4 Portion-aware meals; swap one without abandoning the plan

INTERNAL SIMULATION — NOT CUSTOMER DATA

92%

Average macro alignment ·
5,000 simulated profiles ·
representative 30–45 recipe
catalogue

LIVE MVP
app.nutrics.ca

92% is an internal simulation of the Nutrics matching engine on a representative 30–45 recipe catalogue: product proof, not customer outcome data. Screens: live MVP with an example profile.

Personalized demand in. Consolidated production out.

Nutrics buys wholesale, sells retail, and scales through existing food-production capacity.

*Pre-launch target gross margin on meal sales (retail meal revenue minus wholesale meal cost), before fulfillment and other operating costs; to be validated through food-partner pricing and Toronto commercial operations. The C\$9.99 delivery fee is separate revenue with its own delivery costs; it is not pure profit. Partners A–D are illustrative; no production volume is guaranteed.

The technology exists. Now we prove retention.

We’re not raising to find out if we can build it.
We’re raising to prove people keep using it.

Every order gives Nutrics more to learn from.

Pre-launch: this is the data advantage Nutrics is designed to build as customer interactions accumulate.

SIGNALS EACH ORDER CAN CREATE

Nutrition

macro targets · calorie fit · portions

Preference

meals chosen or rejected · ratings · cuisines · substitutions

Behaviour / adherence

repeat orders · skipped meals · swaps · plan adherence

Context

schedule · meals per day · travel · pauses

What the customer tells us → what the customer actually does

→ longitudinal dataset → better models over time

A competitor can copy the interface. It can't instantly copy the history.

Research context: personalized nutrition advice improved diet more than generic advice across 11 RCTs [1]; few AI dietary-intervention studies assessed long-term adherence [2].

Win Toronto. Then repeat the model.

01 · BEACHHEAD

Toronto / GTA

Prepared-meal customers seeking personalized nutrition. Prove retention, repeat purchase, unit economics, the food-partner model and delivery.

02 · NATIONAL EXPANSION

C\$5.0B · Canada

Canadian ready-meals market, 2025. [1]
Repeat the city model across major Canadian metros.

03 · PLATFORM EXPANSION

US\$30.9B by 2030

Global personalized nutrition market. [2]
Over time, extend the intelligence layer into nutrition tools for dietitians, food partners and other B2B channels.

Start narrow. Prove the model. Expand geographically, then expand the platform.

C\$600K to turn a working product into commercial proof.

Amritpal Moomie

FOUNDER · SOLO FOUNDER TODAY

Technology. 15 years building and shipping production software. Built the current Nutrics MVP, personalization engine and platform.

Operating experience. Ran Nutrics Phase 1 in 2024 using one in-house kitchen and direct fulfillment across the Toronto region.

What Phase 1 taught. Personalization creates operational complexity. Customer needs keep changing, and one production source limits flexibility.

Current model. Nutrics was rebuilt around an intelligence layer, distributed food partners and structured fulfillment.

THE RAISE

C\$600K pre-seed

≈ US\$424K* · Working product → commercial proof

WHAT THIS ROUND BUYS

- Toronto commercial launch
- Paying customers
- Repeat purchase + retention data
- Validated unit economics
- **Repeatable city model**

USE OF FUNDS

Product + data · Customer acquisition · Nutrition + team · Fulfillment + logistics · Working capital

Build the intelligence. Prove the behaviour. Scale the model.

Nutrics has a solo founder today. Planned key hires funded by this round: Nutrition Lead / Nutritionist, Fulfillment Operations Lead, Logistics Coordinator. A Registered Holistic Nutritionist has been shortlisted for Nutrition Lead — not yet hired. *USD equivalent approximate; based on the [Bank of Canada](#) daily rate as of 25 Sep 2026 (US\$1 = C\$1.4145).
