

# Meal delivery solved convenience. It didn't solve staying relevant.

CONCEPTUAL — NOT DATA

WHAT THE BENCHMARKS SUGGEST

**~74%**

annualized churn benchmark for meal-kit subscriptions

CITED REASONS FOR CANCELLING

**33%**

**Meal fatigue & menu repetition**  
→ the experience stays static

**13%**

**Lifestyle changes**  
→ the customer changes

**54%**

**Price, logistics & food waste**  
→ not a personalization problem

## Customers change every week. Their meal plan should too.

Chart is conceptual, not data. Churn estimate (73.6% annualized) and cited-reason split: [RetentionCheck, "Meal Kit Subscription Churn Benchmarks," updated May 2026](#) — editorial estimates anchored to published industry ranges; not audited industry statistics and not Nutrics data. Meal kits are the closest published benchmark; Nutrics sells prepared meals.

# The customer shouldn't have to keep adapting to the meal service.

STATIC EXPERIENCE

The customer does the adapting.

ADAPTIVE EXPERIENCE

The product does more of the adapting.

Nutrics is designed to move the adaptation burden to the product.

Hypothesis, not a result: improved repeat purchase and retention are to be validated through commercial operations. Research context: personalized nutrition advice improved dietary intake more than generic advice across 11 RCTs [1] — a diet-quality finding, not a retention finding. [1] [Jinnette R et al. Adv Nutr 2021;12\(3\):657–669](#)

# The food is the output. The intelligence is the product.

The menu adapts to the customer, not the other way around.

# Built — not just proposed.

- 1 Profile — nutrition target set
- 2 Ask — a plan in plain language
- 3 Plan — built from real, available meals
- 4 Swap — adapt one meal, keep the plan

This is the first version of the adaptive loop.

## PROVEN TODAY

- Working live product
- Matching engine
- Plan generation
- Portion-aware selection
- Macro-alignment capability

## NOT YET PROVEN

- Willingness to pay
- Repeat purchase
- Retention

What this round tests (slide 08)

## INTERNAL SIMULATION — NOT CUSTOMER DATA

92% Average macro alignment · 5,000 simulated profiles · representative 30–45 recipe catalogue

[app.nutrics.ca](https://app.nutrics.ca)

92% is an internal simulation of the Nutrics matching engine on a representative 30–45 recipe catalogue: product proof, not customer outcome data. Screens: live MVP at app.nutrics.ca with one example profile; the per-plan match figures shown in the screens apply to that profile only.

# Every order creates revenue — and another signal.

THE TRANSACTION

THE LEARNING

What happens after delivery feeds the next plan.

MEALS · BUY WHOLESALE → SELL RETAIL

**~46%** target gross margin\*

DELIVERY

**C\$9.99** per delivery drop

Separate revenue with its own delivery costs — not pure profit.

NUTRICS OWNS

Customer relationship · personalization · retail pricing · demand aggregation · ordering · feedback + data

FOOD PARTNERS OWN

Food preparation · production execution

The same order that earns revenue teaches the next plan.

\*Pre-launch target gross margin on meal sales (retail meal revenue minus wholesale meal cost), before fulfillment and other operating costs; to be validated through food-partner pricing and Toronto commercial operations. The C\$9.99 delivery fee is separate revenue with its own delivery costs; it is not pure profit. Fulfillment, consolidation and last-mile delivery are operating costs outside the meal margin. Food-partner outreach is underway; no agreements are signed yet.

# Every order gives Nutrics more to learn from.

Prospective data advantage: designed to compound as real customer interactions accumulate.

A competitor can copy the interface. **It can't instantly copy the history.**

# Win Toronto. Then repeat the model.

Start narrow. Prove the model. Expand geographically. Then expand the platform.

# C\$600K to turn a working product into commercial proof.

**Amritpal Moomie**  
FOUNDER · SOLO FOUNDER TODAY

**Technology.** 15 years shipping production software. Built the Nutrics MVP, personalization engine and platform.

OPERATING EXPERIENCE → CURRENT MODEL

- **PHASE 1 · 2024** Direct model: one in-house kitchen, direct fulfillment across the Toronto region.
- **WHAT IT TAUGHT** Personalization creates operational complexity. Customers keep changing. One production source limits flexibility.
- **CURRENT MODEL** Intelligence layer · distributed food partners · structured fulfillment

THE RAISE  
**C\$600K pre-seed**

≈ US\$424K\* · Toronto launch planned January 2027

WHAT THIS ROUND MUST PROVE

- Paid demand
- CAC
- Repeat purchase
- Retention
- Unit economics
- Food-partner economics
- Delivery economics
- Operational reliability

USE OF FUNDS

Product + data · Customer acquisition · Nutrition + team · Fulfillment + logistics · Working capital

We're not raising to prove we can build it.  
We're raising to prove it can become a scalable business.

Nutrics has a solo founder today. Planned key hires funded by this round: Nutrition Lead / Nutritionist, Fulfillment Operations Lead, Logistics Coordinator. A Registered Holistic Nutritionist has been shortlisted for Nutrition Lead — not yet hired. \*USD equivalent approximate; based on the [Bank of Canada](#) daily rate as of 25 Sep 2026 (US\$1 = C\$1.4145).
